DETAILED ACTION

Allowable Subject Matter

1. Claims 1-5 and 7-11 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 1-5, and 7-11 are allowed since the prior art of record does not teach or suggest in combination wavelength assignment exchanging means for identifying, based on Bit Error Rate (BER) information, wavelengths in the high QoS communication having high BERs and exchanging the identified wavelengths having the high BERs with an equal number of wavelengths having low BERs in the low QoS communication, unless the wavelength having the high BERs in the high QoS communication outnumber the low BERs being used for the low QoS communication, in addition to other cited limitations in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Barnard et al. (U.S. Patent US 6,115,157) disclose a method of equalizing channels of a WDM link comprises identifying an error threshold level BER

for each optical channel; Le Bouette et al. (U.S. Patent US 6,859,623 B2) teaches a wavelength allocation scheme for a QDM system; Graves et al. (U.S. Patent Application Publication US 2002/0181042 A1) discloses a wavelength distribution architecture and implementation for a photonically switched network.
